Primary Examiner, Art Unit 1791

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submissions filed on April 29, 2008 and August 25, 2008 have been entered.

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Andrew Meikle on December 18, 2008.

The application has been amended as follows:

In the claims:

Claims 9, 25 and 26 have been amended as follows:

9. (Currently Amended) The tubeless tire of Claim 1, wherein said inorganic layered compound is a clay mineral having swellability, that is swelled and cleaved in a solvent, and

said resin is a high hydrogen bond resin comprising polyvinyl alcohol or polysaccharide;

wherein in said gas barrier layer, said inorganic layered compound and said resin are mixed in a volume ratio of 5/95 to 90/10.

25. (Currently Amended) The tubeless tire of Claim 24, wherein said inorganic layered compound of said gas barrier layer is a clay mineral having swellability, that is swelled and cleaved in a solvent, and

~~said resin is a high hydrogen bond resin comprising polyvinyl alcohol or polysaccharide;~~

wherein in said gas barrier layer, said inorganic layered compound and said resin are mixed in a volume ratio of 5/95 to 90/10.

26. (Currently Amended) The tubeless tire of Claim 24, wherein said gas barrier layer is obtained by

dispersing said inorganic layered compound in said resin or a resin solution in a state of being swelled or cleaved in a solvent,

applying said solution to the inner face side of said carcass ~~inner liner~~ layer while maintaining said state, and

removing said solvent.

Summary of above-noted December 18, 2008 Interview: Agreement was reached on the changes noted above in order to place this application into condition for allowance. These changes were proposed by the examiner to avoid several inconsistencies with

the independent claims as amended. In particular, the change to claims 9 and 25 were proposed because the resin is already defined as polyvinyl alcohol in claims 1 and 24. The change to claim 26 was for consistency with claim 24 (e.g. claim 24, line 6). Also, to ensure that the references on the missing PTO-1449 form from 4-23-2004 are made of record, applicant was advised that the examiner will list those references not already of record on form PTO-892. Copies will be included only for those references for which copies are not presently in the file.

Reasons for Allowance

2. The following is an examiner's statement of reasons for allowance:

The claims are allowed for the reasons advanced by applicant in the remarks accompanying the August 25, 2008 amendment, coupled with the 1.132 Declaration and accompanying remarks filed April 29, 2008, the following added for emphasis.

Among the closest prior art, Kaido et al. (US 6,136,123) discloses a tire including an air permeation prevention layer in the form of a thermoplastic film material, including polyvinyl alcohol (note col. 3, line 25). Inclusion of a layered filler in the film resin as claimed is not however suggested. Further, the reference does not suggest a silica inorganic filler in the layer upon which the resin film layer is formed. The Kotani et al. patents (US 5,700,560 and US 6,316,093) disclose a gas barrier film of a polyvinyl alcohol resin composition that includes an inorganic layered compound meeting the claimed dimensional requirements. The Kotani patents do not however suggest use as a gas barrier layer in a tire or especially lamination thereof to a rubber layer containing

silica as claimed. Hopkins et al. provides evidence that it is known in general to include silica in rubber compositions for various tire components, including tire innerliner compositions (e.g. those including butyl rubbers), but does not teach or render obvious specific inclusion of such in a rubber layer of a tire adjacent a layered compound containing polyvinyl alcohol resin gas barrier layer or the advantageous properties that would accompany such a combination (in view of especially the 4/29/2008 1.132 declaration). This declaration in particular evidences unexpectedly improved properties with regard to the rate of decrease in pressure after machining and the appearance of the gas barrier layer when a layered compound containing polyvinyl alcohol gas barrier resin layer is formed on a rubber layer including silica filler.

In light of the above noted results suggesting an unexpected benefit accompanies forming a layered compound containing polyvinyl alcohol gas barrier resin layer on a rubber inner layer containing silica filler, as well as the closest prior art not specifically motivating the ordinary artisan to provide a layered compound containing polyvinyl alcohol gas barrier layer on a silica filler containing inner tire rubber layer, the closest prior art fails to suggest or render obvious a tubeless pneumatic tire as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
